

Senior Technical Project Manager / Technical Analyst

Project Description: This individual will serve as the Technical Project Manager for multiple scrum teams in the security group. Will also serve as the Technical Analyst to understand, analyze and document requirements and will plan and follow release processes.

Required Skills:

- Have previously managed/led complex IT projects or multiple technology projects across several teams (8+ years)
- Demonstrated ability to conduct and/or lead discussions with Business partners and Senior Technology Leadership
- Must be able to interact and speak with a wide variety of people, from engineers, developers, users, Senior Leadership, and the Business
- Technical experience – preferably a background in software development.
- Demonstrated strong problem-solving skills
- Experience with engagement management at external clients
- Experience with budgeting and forecasting
- Experience as a scrum master
- Experience with Agile / Scrum
- Experience using tools such as JIRA or Rally
- Experience with User Stories, Epics, Backlog grooming, all scrum ceremonies
- Advanced Communication skills (written, presentation, meeting facilitation)
- Ability to follow-up and prioritize effectively
- Works Independently, able to take on multiple projects of varying complexity
- Partners and works well with others, is able to negotiate and influence when needed
- Planning and organizing, able to manage large projects with ease

Desired Skills:

- PMP Certification
- Scrum Master Certification
- Previous engineering experience in Technology (software, server, network, or database)
- Experience in Technology Security domains, including PCI Compliance
- Understanding of APIs, Web services, and security infrastructure
- BS Business, Engineering, Computer Science, Management of Information Systems, or equivalent formal training preferred.

Job Responsibilities:

- Project Manage initiatives across multiple scrum teams.
- Work with teams and other project managers to plan work, schedules, and resources.
- Assist as scrum master where needed and update tracking tools
- Manage scope changes
- Manage budget and resources
- Assist with engagement management duties
- Understand technical details of each initiative
- Gather and understand technical requirements. Document requirements.
- Manage issues and risks
- Scrum master role as needed
- Will coordinate the delivery and deployment of medium to large complexity/scale projects, ensuring all timelines are met, issues are communicated in a timely and concise fashion.
- Work with the various Teams to manage and track work that is key to delivering the program.
- Make leadership aware of any issues that will have an impact to the program, as soon as they are known.
- Work to resolve issues as they arrive to keep them from being a barrier to program delivery.
